

Exercise #7

□ Problem 1.

- Write a program that will read each player's name and score as keyboard input, and then save these as records in a file named golf.txt.
- First, have the program ask the user how many players they want to add to their record. Then, ask the user for each name and score individually.
- golf.txt should be structured so that there is a line with the player's name, followed by their score on the next line.

```
Emily
30
Mike
20
Jonathan
23
```

□ Problem 2.

Write a program that reads the records from the golf.txt file written in the last Exercise and prints them in the following format:

```
Name: Emily
Score: 30
Name: Mike
Score: 20
Name: Jonathan
Score: 23
```

- You don't need to turn in your homework, but you should practice all problems because they may appear in the later exam.
 - 作業自己練習就好，不用繳交，之後考試可能會出現類似題目
